

Australian Government
Department of Climate Change

A photograph of a large satellite dish antenna, showing its complex metal structure and the grid of solar panels on its surface, set against a clear blue sky.

International Forest Carbon Initiative

Alex Held (for Gary Richards)
Department of Climate Change

International Forest Carbon Initiative

- responds to Bali decision
- demonstrates that REDD can be part of an equitable and effective international agreement on climate change
- demonstrates that market mechanisms can be used to address REDD
- activities focused on PNG and Indonesia
 - Indonesia – Australia Forest Carbon Partnership
 - Papua New Guinea – Australia Forest Carbon Partnership

International Forest Carbon Initiative

AU\$200m for REDD, focussed on:

- increasing international forest carbon monitoring and accounting capacity
- trialling approaches on methodological, technical and policy issues necessary to demonstrate that we can take robust and verifiable action on REDD
- undertaking practical demonstration activities (as in Bali decision)

Capacity building – carbon accounting and monitoring

- supporting Indonesia and Papua New Guinea in their development of national carbon accounting and monitoring systems
- cooperation through Group on Earth Observations
- working closely with the Clinton Climate Initiative to develop a global carbon monitoring system

Demonstration activities

- Kalimantan Forests and Climate Partnership
 - Australia has committed AU\$30 million to the Partnership, located in Central Kalimantan
 - aims to trial an innovative, market-oriented approach to financing and implementing measures

Kalimantan Forests and Climate Partnership
